

# STREAMKIT Product Options

## Reach Out to the World

Museums, science centers, zoos, and aquariums have long delivered powerful informal educational learning opportunities to visitors through compelling storytelling, live science stages, lecture presentations, and other mission-driven experiences within their walls. With the ever changing landscape of visitorship and the need for a robust digital presence, the ability to exponentially increase the reach of these experiences by enabling live streams and broadcasts of produced content will prove vital to the continuing success of cultural institutions.

## D3D StreamKit

A compact, cost-effective and fully-integrated solution to enhance educational and cultural attractions' outreach to audiences beyond traditional boundaries - be it an in-house broadcast to an overflow seating area, a weekly educational digest sent out to subscribed classrooms, or live-streamed science demonstrations, lectures or town-hall meetings. D3D StreamKit is a powerful tool to enable a robust digital engagement with stakeholders, visitors, and the community at large.

### -StreamKit Theater (Base Package)

For venues where a theater or auditorium already provides event audio/visual capabilities, StreamKit Theater offers a fixed, seamless integration into existing a/v infrastructure to provide streaming capabilities for all non-encrypted live or recorded theater content and presentations. **Equipment includes: 4 HDMI inputs, 1 RCA audio input, 1 PTZ camera, vimeo pre-configuration, production software, remote support, and remote integration.**

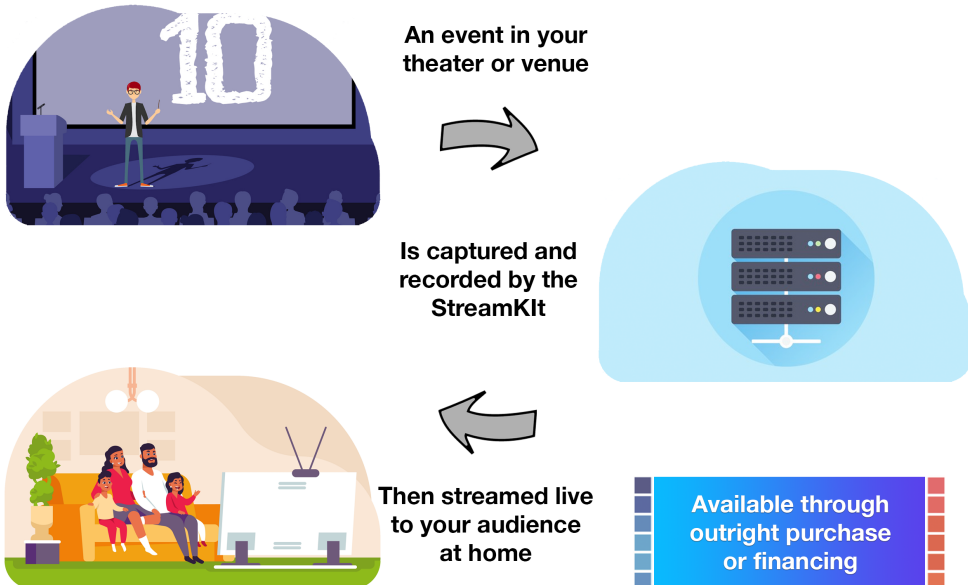

### -StreamKit Go (Added Flexibility)

For venues desiring additional flexibility to stream live or professionally record content from different locations, StreamKit Go offers mobility through a compact, wheeled all-in-one cabinet; providing all essential StreamKit production and live-streaming functions anytime - anywhere. **Equipment includes (all of the above plus): 12 channel audio mixer, 2 wireless microphones, 2 HDMI extenders, 1 preview monitor, assembled rolling a/v rack, and a starter pack of cables.**

### -StreamKit Media Producer (Premier Package)

For more sophisticated events and productions, StreamKit Media Producer provides a robust, mobile system based on the StreamKit GO platform. A versatile tool that includes expanded media production capabilities for a true professional and user-friendly mobile production suite. **Equipment includes (all of the above plus): 3 point light kit, 2 wireless microphones, 1 HDMI extender, 1 PTZ camera, video editing software, and a graphics starter pack**

## How Does It Work?
